## Qualification Summary:

A Sr. Front End Developer/UI Developer with 5 Years of extensive experience in creating responsive web applications leveraging my strong knowledge in User Experience, Web Design, and Front End Frameworks.

A solid hands on business management experience, with a diverse portfolio of Windows 8 and Windows Phone 8 applications.

In more than 70 apps created; I led the whole end-to-end process, from requirements' collection, app design, to implementation, testing, delivering, and eventually adding another satisfied client to my reference list.

Moreover, I have very good systems administration and troubleshooting skills covering Hardware, Networking, as well as Domain issues.

In addition to my technical capabilities, I managed to hone my leadership skills by joining several student activities, as well as founding one.

My entrepreneurial capacities allow me to work independently and with teams, either leading or collaborating.

Lastly, during the past years I successfully managed several projects and public events that were complex in structure and very challenging in nature, something that helped me understand what does it look like working in a matrix environment and the how's to succeed in it.
